

DVS Package Options

DVS operates on industry leading Intel powered computer components, utilizing Linux to achieve maximum life cycle cost management, and industrial grade reliability .

Critical Event delivers the DVS system software on a solid state, mini-IDE device, with a 4 channel video capture card.

Software delivery on the mini-IDE device facilitates labor saving installation and maintenance. The system software **INCLUDES** the DVS application, Linux OS, and the Apache Web Server. **NO SEPARATE OS PURCHASE OR LICENSE IS REQUIRED**

Packaging options are mini-tower or rack mount cases.

Additional Video Capture cards can be purchased separately for spares and upgrades.

Maintenance and feature upgrades are offered at attractive annual rates.

At Critical Event, our mission is to seek out, introduce, and distribute products serving the digital visual imaging market.

Critical Event is a Texas Corporation.

DVS DIGITAL VISUAL SERVER

*Introduction and Distribution
of Visual Imaging Products*

DVS Digital Visual Server

DVS is a visual event recording, storage, notification, and access product, positioned as a mid-tier entry into the market, providing network access to view live and recorded events.

Up to 8 cameras are supported (4 for a P3 system) with individually programmable recording times, image compression, motion detection, and remote alert generation.

DVS utilizes industry standard computing platform components, with software delivered pre-installed and configured on a Mini-IDE, solid-state disk device. Powered by Linux means no operating system or annual license fees, delivering an inexpensive life cycle cost in its class.

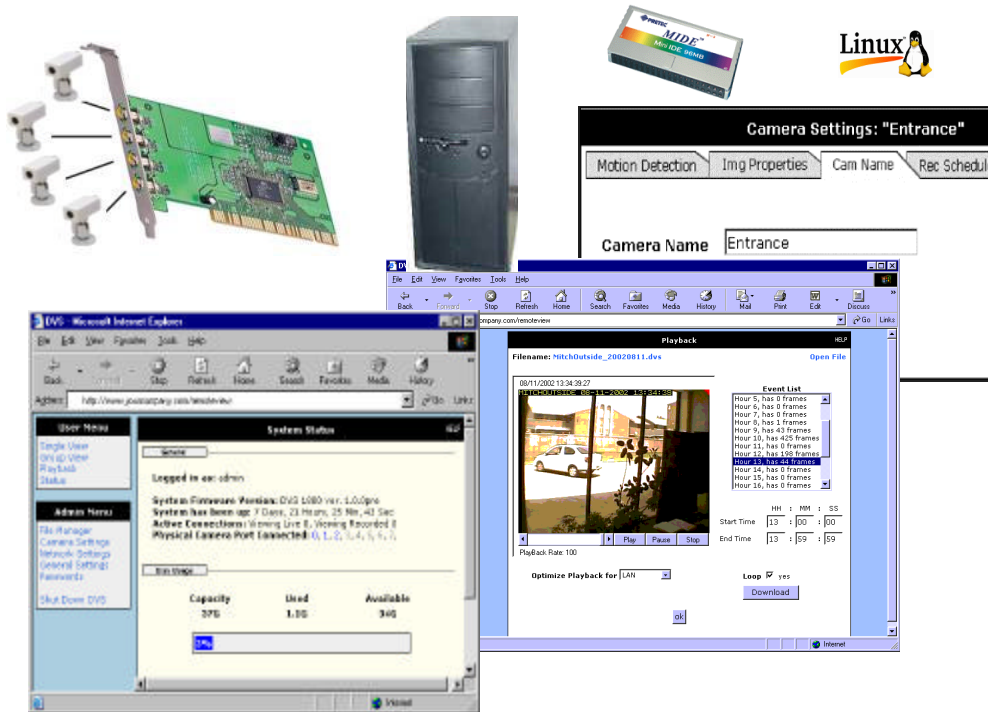

With Internet connectivity (LAN, DSL, or Cable

Network Alerts and Access

Modem) DVS delivers alerts with a image of the triggering event straight to your email inbox.

With Internet or Dialup connectivity, you can see real time events indexed by time and camera to examine past event logs.

Accessories

DVS is compatible with and complemented by a wide range of accessories. Imaging, power conditioning, enclosure, and network access products in a price and performance range from economy to industrial grade are available to complete your DVS system installation.

Installation

A quality well planned installation is the final and equally important part of a DVS system. A DVS system will perform only as well as the installation it receives.

Intended Applications

While highly reliable in design and implementation, DVS IS NOT INTENDED TO BE A SUBSTITUTE FOR HIGH END PROFESSIONAL GRADE SYSTEMS USED IN SECURITY AND SURVEILLANCE APPLICATIONS WHERE INSTALLATIONS AND OPERATION MUST BE TAMPER PROOF AND FREE FROM ANY IMAGE CAPTURE FAILURES.
